

PHYSICAL REVIEW E

Charge to Referees

Physical Review E is committed to the dissemination of work of high quality and has grown steadily in size and stature. We wish to maintain and improve the journal's appeal and at the same time control its burgeoning growth. Your role as a referee is critical to our success in achieving stricter acceptance criteria. We do not want to publish papers that are merely new or free from error but rather those that contain substantial advancement of previously established knowledge or report significant new developments in the field.

When reviewing this paper we appeal to you to write an incisive, well justified report that evaluates the following criteria:

- Does the paper contain new results that significantly advance the field?
- Is the paper interesting and of high quality?
- Is the paper clearly written in a style consistent with accepted standards of scientific writing?
- Is the purpose of the work clearly stated, is relevance to other recent research explicitly demonstrated?
- Does the content of the paper justify its length?

We appreciate your efforts and thank you for your help. Your contribution as a conscientious referee to maintain high standards will benefit not only the journal but the scientific community as a whole.

The Editors
